£499.00 4.3★

1. **Celestron 31045 AstroMaster 130EQ Newtonian Reflector Telescope** - £275.00, 4.4★ The AstroMaster 130EQ offers a larger aperture of 130mm compared to the Usogood’s 42mm lens, providing brighter and more detailed images, especially for celestial bodies. However, it's bulkier and less portable, making it less convenient for hiking or birdwatching. This telescope is ideal for amateur astronomers looking to delve deeper into the night sky rather than those who need a compact option for outdoor activities.

2. **Telescopes for Adults Astronomy, 80mm Aperture 600mm Refractor Telescope** - £99.99, 4.4★ With an 80mm aperture, this refractor telescope offers a good balance of portability and performance. It's a great step up from the Usogood if you're serious about astronomy but still want something lightweight. While it lacks the compactness of the monocular, its performance in low-light conditions is significantly better. Perfect for beginners eager to explore the night sky without breaking the bank.

3. **Celestron 31145 NexStar 130SLT Portable Computerised Newtonian Reflector Telescope** - £499.00, 4.3★ This high-tech telescope features a computerized mount that automatically locates celestial objects. Its 130mm aperture ensures excellent image quality, surpassing the Usogood in both brightness and detail. However, at a higher price point, it may be overkill for casual birdwatchers or hikers. Choose this if you’re ready to invest in astronomy and want a user-friendly experience with advanced features.

4. **Celestron 31042 AstroMaster 114EQ Newtonian Reflector Telescope** - £249.00, 4.3★ Another great option from Celestron, the AstroMaster 114EQ offers a 114mm aperture, providing improved light-gathering ability compared to the Usogood. While it is still portable, it’s not as compact as a monocular. This is a solid choice for users who want a versatile telescope that can handle both terrestrial and celestial viewing without the complexity of computerized mounts.

5. **Celestron 22087 NexStar 90SLT-Mak Portable Computerised Maksutov-Cassegrain Telescope** - £349.49, 4.3★ This telescope combines portability with quality optics, featuring a 90mm aperture and a compact design. It’s perfect for those who want a mix of terrestrial viewing and astronomy in one package. Its computerized features are similar to the 130SLT but at a lower aperture. If you’re looking for versatility and ease of use in a portable design, this is a great alternative, though it may not perform as well in low-light compared to larger telescopes.

Still Buy the Original If...

The Usogood monocular is perfect for casual birdwatchers or hikers who need a lightweight, portable option for quick observations. If you're looking for something easy to carry on your outdoor adventures without the need for complex setups, stick with the Usogood.
